For over 60 years, we've been crafting baseball batting cages and golf practice nets. Municipal parks, high schools, universities, and backyard enthusiasts throughout the South have used our nets for their sporting requirements. Now, we're looking to help fulfill your sports net needs.

All of our nets are made from durable nylon or polyethylene netting. In addition to nets that are intended for permanent placement, we offer portable protector and golf practice nets for those athletes who want to get in some practice wherever they can. Managers, coaches, and athletic directors are always impressed by our high quality and low price. We take pride in our reputation of providing complete satisfaction to our coaches, who have all become repeat customers!!

## HDPE vs NYLON

High density polyethylene (HDPE) is made from naturally UV resistant materials which do not absorb water and will not rot, but has a lower break strength than nylon. High density polyethylene only loses 10% of its strength over its lifetime, thus making it ultimately ideal for outdoor use.

Nylon netting has an initially high break strength, but used outdoors, the protective coating begins to wear thin. This wearing causes the nylon netting to shrink, fade, and eventually rot. However, nylon netting can be periodically treated to prolong the life of the net.

## NYLON BATTING CAGES

Our handmade batting cages are of the highest quality and custom made in various sizes and weights. The netting is a high tenacity nylon twine, dyed black, bonded and UV stabilized. All of our batting cages and foul ball screens are hung on the square to minimize sag. All perimeter edges including bottom and center rib line have a 3/8" dia. rope, and are serged with a continuous triple hitch seam, for a very strong border. Top and bottom corners are also reinforced and have 5 foot tails for tying.

## POLYETHYLENE (HDPE) BATTING CAGES

Our stock sized poly batting cages are made from naturally UV resistant material that will not absorb water. Perfect for wet, humid or hot climates. Our poly cages are extruded black that won't fade or discolor from sunlight. Each is hand-sewn with a knot at every mesh. Hung square with 1 7/8" square-mesh netting, with a rope running along the surrounding perimeter of the cage. Each cage has a 7' doorway in the corner. Entry flaps are reinforced with yellow twisted polyethylene rope. Impact screens included to absorb the impact of the ball on the net at the batters-end of the tunnel.
